

## **Dedication Signing**

### **Standard:**

When installed along a roadway rather than the recommended off-roadway memorial plaques, memorial/dedication signs shall be ground-mounted and designed with the following letter sizes and series: 6.0 / 4.5 inch D for conventional roads and 8.0 / 6.0 inch D for expressways and freeways. Memorial/dedication signs shall not be installed on overhead sign assemblies. Memorial/dedication signs shall not be installed on facilities leading to the highway actually being memorialized. Memorial/dedication names shall not appear on guide signs approaching the exit or turn for the memorial highway. Memorial/dedication signs shall be limited to one installation per direction on the highway being memorialized or dedicated.

### **Support:**

If a roadway qualifies for guide signs and is named after a person, such as Martin L. King, Jr. Blvd., the signs are not considered memorial or dedication signs. In this case they would be considered guide signs (as would any other Street Name sign) and designed in accordance with the guide sign requirements for the appropriate type facility.
